2011

Minsk State College of Electronics

Electrical Engineering, Electromechanics

Skills

- PHP, JavaScript, Go
- Laravel, Symfony, Drupal
- Vue.js, Nuxt (SSR), jQuery, Bootstrap
- PostgreSQL, MySQL, ClickHouse, Redis
- MeiliSearch, OpenSearch, Apache Kafka
- REST / SOAP APIs, OpenAPI (Swagger), WebSockets

Alexey Gavrosh

PHP Developer — Laravel / Vue / Nuxt

Seasoned software engineer specialized in backend-heavy platforms for e-commerce, payment processing and content systems. 7+ years of owning the full delivery cycle — architecture and technical design, API development, event-driven pipelines, search, payment and logistics integrations — through to production operation. Combines deep engineering expertise with team practices: technical interviews, onboarding and mentoring.

Experience

7 years 9 months

09.2024 — 08.2026

Maxbitsolution · maxbitsolution.com

PHP Developer

Engineer and evolve high-load, business-critical backend systems for payment processing, iGaming content delivery and infrastructure management, ensuring fault tolerance, horizontal scalability and observability. Spearhead the design and implementation of service APIs (RESTful, SOAP), event-driven data pipelines on Apache Kafka and OpenSearch, and CI/CD automation with Argo CD. Contribute to the target architecture of a scalable microservice ecosystem: technical design, OpenAPI contracts and data modeling across PostgreSQL, MySQL and ClickHouse. Drive the integration of AI services into the product landscape — LLM-powered automation, AI/ML features, product analytics and dashboards. Conduct technical interviews and run structured onboarding of new engineers.

12.2020 — 09.2024

Ontid · ontid.com

Fullstack Developer

Owned the full engineering lifecycle of the company's e-commerce platform family — core backend, customer portal and Nuxt.js storefront — from requirements and architecture to production support. Designed architectural solutions for distributed web applications: system decomposition, data models, integration and caching layers, API design. Delivered mission-critical integrations: payment providers (Mollie, PayPal), EU VAT validation, SendCloud logistics, MeiliSearch full-text search and realtime updates over WebSockets. Automated electronic document flow: queue-based generation of invoices and order documents, Excel exports, SFTP and 1C data exchange. Acted as IT consultant for stakeholders; modernized legacy codebases and introduced PHPUnit and CI practices.

11.2018 — 11.2020

7745.by

Web Developer (Drupal / PHP / JS / Laravel)

Developed the public site and internal modules of one of the largest Belarusian online retailers — an e-commerce platform serving a network of 20+ warehouses. Architected the platform's search logic and business rules engine; built electronic document flow (invoices, waybills) and integrations with 1C-based ERP (XML/CML/YML), bank payment and credit systems, logistics and inter-warehouse operations. Engineered data exchange with external services and marketplaces via API/SOAP; implemented social authorization and Yandex.Metrica / Yandex.Direct integrations. Developed client-side computer-vision features — camera access and real-time object recognition with JavaScript libraries.

Projects

- Payment integrations (Mollie, PayPal, banks), 1C (XML/CML/YML)
- Docker, CI/CD, Argo CD, Nginx, Linux, Git
- PHPUnit, HTML/CSS, bash

Languages

Russian — native

English — B1 (intermediate)

CASINO CONTENT MANAGEMENT SYSTEM AND MIDDLEWARE

DESCRIPTION

Centralized content management system and middleware for an iGaming platform: management of bonuses, banners and event catalogs, geo-distribution and multi-currency delivery of content to player-facing applications.

ENVIRONMENT

PHP, Laravel, MySQL, Redis, REST API, Swagger, Docker, QR-code generation

PAYMENT MATCHING AND TRANSACTION CONTROL PLATFORM

DESCRIPTION

Back-office platform for payment operations: matching of deposits and cashouts, balance management, bank administration, check-verdict processing and statistics, per-project auto-split rules.

ENVIRONMENT

PHP, Laravel, MySQL, Redis, Sharp admin panel, Swagger (OpenAPI), Guzzle, Docker

MRS — DOMAIN & INFRASTRUCTURE MANAGEMENT SYSTEM

DESCRIPTION

Internal platform automating management of domains, redirectors, geo-routing and SSL certificates across the company's distributed infrastructure.

ENVIRONMENT

PHP, Laravel, MySQL, Redis, Cloudflare API, OVH API, Dynadot API, prerender

PROJECT ROLES

PHP Developer

PERIOD

09.2024 – 08.2026

RESPONSIBILITIES & ACHIEVEMENTS

Designed and developed core CMS modules — bonus engine, banner management, geo-sorted event feeds and multi-country/multi-currency catalogs; implemented file management and activity logging; built middleware APIs consumed by player-facing applications.

PROJECT ROLES

PHP Developer

PERIOD

09.2024 – 08.2026

RESPONSIBILITIES & ACHIEVEMENTS

Developed the deposit/cashout matching engine and the check-verdict subsystem with statistics; implemented balance and bank management workflows; built the admin panel and the internal/external API layer; introduced mutex-based concurrency control for financial operations.

PROJECT ROLES

PHP Developer

PERIOD

09.2024 – 08.2026

RESPONSIBILITIES & ACHIEVEMENTS

Integrated Cloudflare (domains, rules, SSL, A-records, domain-IP bindings), OVH (IP purchase and distribution) and Dynadot (domain purchasing); implemented redirector and geo management, certificate workflows and automated cache purge across environments.

**CREOSERVER — E-COMMERCE
PLATFORM BACKEND**

DESCRIPTION

Core backend of an international e-commerce platform: product catalog, order and offer processing, electronic document flow, payments, logistics and full-text search.

ENVIRONMENT

PHP, Laravel, MySQL, MeiliSearch (Scout), Laravel Passport, WebSockets, queues, Mollie, PayPal, SendCloud, EU VAT validation, Cloudinary, Google APIs, Mailjet, SFTP

CREOSERVER CUSTOMER PORTAL

DESCRIPTION

Customer portal of the Creoserver/Toflow product: product catalog with attributes, shopping cart, payment and delivery presets, personal account.

ENVIRONMENT

PHP (7.3–8.x), Laravel, MySQL, REST API

**WEBSHOP — NUXT.JS
STOREFRONT**

DESCRIPTION

Multilingual e-commerce storefront with server-side rendering, realtime updates, SEO optimization and analytics.

ENVIRONMENT

Node.js, Nuxt (Vue.js, SSR), Element UI, Bootstrap, Axios, Laravel Echo (WebSockets), i18n, reCAPTCHA, Google GTag

PROJECT ROLES

Fullstack Developer

PERIOD

04.2021 – 09.2024

**RESPONSIBILITIES &
ACHIEVEMENTS**

Designed order and offer processing pipelines; moved invoice/order document generation to a queue-based async flow and significantly accelerated it; configured MeiliSearch full-text search for catalog and customers; implemented multi-PSP payment flows, EU VAT validation and customs handling for international parcels; built SendCloud shipping integration, Excel exports and SFTP-based data exchange.

PROJECT ROLES

Fullstack Developer

PERIOD

12.2020 – 09.2024

**RESPONSIBILITIES &
ACHIEVEMENTS**

Developed catalog subsystems (categories, attributes, associated products, banners); implemented cart, payment and preset workflows; maintained and evolved the portal API consumed by the storefront; covered the PHP 7 → 8 migration path.

PROJECT ROLES

Fullstack Developer

PERIOD

10.2021 – 09.2024

**RESPONSIBILITIES &
ACHIEVEMENTS**

Developed storefront components and the API layer; configured SSR, internationalization and SEO infrastructure (sitemap, robots, optimized images); implemented realtime updates via Laravel Echo and analytics/reCAPTCHA integration.

7745.BY — MULTI-WAREHOUSE E-COMMERCE PLATFORM

DESCRIPTION

One of the largest Belarusian online retailers: an e-commerce platform serving a network of 20+ warehouses with a unified catalog, logistics and electronic document flow.

ENVIRONMENT

PHP, Drupal, Laravel, jQuery, MySQL, 1C (XML/CML/YML), REST / SOAP, FTP

PROJECT ROLES

Web Developer

PERIOD

11.2018 – 11.2020

RESPONSIBILITIES & ACHIEVEMENTS

Developed the public site and internal modules — social authorization, Yandex.Metrica and Yandex.Direct integrations, search logic and business rules engine; built electronic document flow (invoices, waybills); integrated 1C-based ERP for stock and price synchronization across the warehouse network; connected bank payment and credit systems; implemented logistics and inter-warehouse delivery management; engineered API/SOAP data exchange with external services and marketplaces.

PET PROJECTS — TELEGRAM BOTS IN GO

DESCRIPTION

Shop Admin Bot — statistics and push notifications (orders, customer chats, tickets, reviews) for a Laravel/MySQL webshop. RSS Aggregator — worker-pool polling, feed autodiscovery, PostgreSQL with embedded migrations, dedup.

ENVIRONMENT

Go, telebot, MySQL, PostgreSQL, Docker, GitHub Actions (CI with integration tests)

Go Developer

PERIOD

2026
